

Cover letter

Dear Hiring Manager.

**It sounds like you need to import CSV file into MySQL database and apply some logic to find matched users based on the specified conditions.
I have solid experience in Laravel/Vue.js and CSV importing and I am highly interested in your project.
I hope to discuss the details further.**

Kind regards.

Taras.

What import scripts have you built before? What laravel and VueJS urls can you show us that you did? What did you do with them?

I have solid experience in creating PHP scripts that imports CSV file.

Please have a look at this screenshot: <http://prntscr.com/o21nbl>

This is simple word game , but the client wanted me to import quiz data and user data as CSV format.

So I placed D&D widget into admin website and implemented the import module with PHP.

I have other one that imports and export to sql file from bunch of data into database by excluding or including with conditions and processing the various exceptions that can be occurred on csv file.

Please look at this screenshot: <http://prntscr.com/o21pqv>

Speaking of my Laravel/Vue.js experience, I am an expert in them.

Please look at my products I have created with Laravel Framework.
